

Keep Hackers Out Of Your Web Server

Operating secure web servers or services is a tough challenge today as many modern methods exist to attack such systems. Techniques like SQL injection, cross-site scripting and cookie poisoning are used to gain access, steal data like credit card information, or infect your customers with malware.

Astaro Web Application Security protects you against common threats, stops data loss, and aids compliance requirements like PCI.

Try Now!
 Test Web Application Security free for 30 Days:

Benefits

- > Instant protection without changing your web server code
- > Stop intruders from manipulating your web content
- > Prevent data loss of credit cards and customer records
- > Protect your web server from spreading viruses
- > Increase webserver performance by offloading SSL (HTTPS)
- > No special training needed for admins or web developers

Deploy	Protect	Report
<p>Auto Discovery Automatically locates active web servers in your network and prefills configuration for them.</p> <p>Simple Firewall Profiles Choose protections with check boxes, allowing for an easy and fast configuration without the need to be an expert.</p>	<p>Web Application Firewall Process and intelligently modify all web server communication to identify and block hacking attempts.</p> <p>Malware Scanning Files uploaded to the web server and web content served is scanned with dual antivirus engines.</p>	<p>Activity Summary Dashboard reporting gives instant information at-a-glance about the status and activity of the Web Application Security system.</p> <p>Detailed Logging Transactions and attacks are logged and analyzed to create included reports without the need for external products.</p>

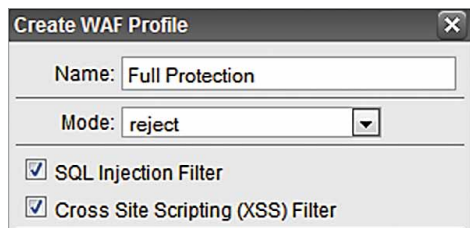

"As a basic web server admin, I couldn't easily fix us if we got hacked. Web Application Security keeps me at ease and didn't force me to learn about the ways all those attacks work."

Joe Delucia, IT Admin

Performance Data

Appliance Model	ASG 110	ASG 120	ASG 220	ASG 320	ASG 425	ASG 525	ASG 625
Server requests per second	105	105	220	260	300	350	400
Web Application Firewall throughput (Mbps)	90	90	200	240	275	320	365
Antivirus Throughput (Mbps)	82	82	180	215	250	290	330

Features

Security

- > URL Hardening engine
- > Form Hardening engine
- > Deep-linking control
- > Directory traversal prevention
- > SQL Injection protection
- > Cross-Site Scripting protection
- > Dual Antivirus engines
- > HTTPS (SSL) encryption offloading
- > Cookie Signing with digital signatures

Usability

- > Auto server discovery scans attached networks and identifies web servers
- > Integrated load balancer spreads visitors across multiple servers
- > Predefined Firewall Profiles for Microsoft Outlook Web Access (OWA)
- > Quick Server switch allows easy maintenance

Logging and Reporting

- > Full transaction log of all activity in human-readable format
- > Astaro Log Management Service Support
- > Auto rotating and nightly archiving of log files
- > Daily activity reporting and usage graphs
- > Detailed reports available on-box without the need for separate reporting products
- > Visual reporting charts clearly identify spikes and deviations
- > Export reporting data to CSV or PDF

Customization

- > Skip individual checks in a granular fashion as required
- > Match requests from source networks or specified target URLs
- > Support for logical AND/OR operators
- > Aids compatibility with various configurations and non-standard deployments
